

# Adapter ring

## Adapter ring

When fitting an actuator to a thermostatic valve, an adapter ring is normally needed to ensure a perfect fit.

Different valves will require different adapter rings. Our standard thermostatic valves, [LinFlow-A](#) (angled) and [LinFlow-S](#) (straight), should be used with a VA 64 adapter ring.

For applications where pressure independent control is needed, the Pettinaroli 91, 92 or 93 series should be selected, along with a VA 64 adapter ring.
